Class: _____

Date: _____

- 2. A check digit is to be used to validate an identification number on input. The identification number contains five digits and the check digit.**

The check digit is calculated by adding up the first five digits, dividing by 10 and taking the remainder.

For example, $5 + 1 + 2 + 4 + 3$ divided by 10 gives a remainder of 5 so the six-digit

identification number would be 512435.

Identify two other validation checks that could be used when inputting this identification number. [2]
